AMENDMENTS TO THE CLAIMS

In the Claims:

Please **CANCEL** claims 1-3 without prejudice and any disclaimer.

Claims 1-3 (Cancelled).

4. (Previously Presented) A liquid crystal display, comprising:

a display unit;

a back light assembly including:

a light source;

a light guiding plate disposed at a side of the light source; and

a light focusing unit disposed on the light guiding plate; and

a mold frame having a first frame receiving the display unit, the light guiding plate and the light focusing unit and a second frame receiving the light source,

wherein the first frame includes:

a bottom surface;

side walls formed vertically on side peripheral portions of the bottom surface except for one side peripheral portion of the bottom surface; and

a supporting member installed at the side peripheral portion of the bottom surface on which the side wall is not formed for supporting the second frame,

wherein the second frame is installed in an inner side of the supporting member and has an upper surface corresponding to an upper surface of the side walls of the first frame.

5. (Previously Presented) The liquid crystal display device as claimed in claim 4, wherein the supporting member has a first fixing member and the second frame has a second fixing member detachably coupled to the first fixing member.

6. (Previously Presented) The liquid crystal display device as claimed in claim 4, wherein the second frame comprising:

an inner side facing the side wall of the first frame and having a first groove formed thereon; and

an outer side having a second groove formed thereon.

7. (Previously Presented) The liquid crystal display device as claimed in claim 6, wherein the first groove receives the light source,

a light source supporting member supporting the light source is installed at both ends of the first groove, and

the second groove receives a connecting member electrically connected to the light source.

8. (Original) The liquid crystal display device as claimed in claim 7, wherein a first portion of the first groove, in which the light source supporting member is positioned, has a substantially rectangular sectional shape defined by a cover portion, a bottom portion and a side portion, an other side of the first portion opposite to the side portion being open, a second portion of the first groove in which the light source is positioned is defined by the cover portion and the side portion.

9. (Original) The liquid crystal display device as claimed in claim 8, wherein a reflection plate is provided below the light guiding plate extended to a lower portion of the light source.

10. (Previously Presented) A container module, comprising:

a first frame receiving a display unit, said first frame including a bottom surface and side walls vertically formed at all side peripheral portions of the bottom surface except for one side peripheral portion of the bottom surface; and

a second frame receiving a light source,

wherein said second frame is detachably coupled to the side peripheral portion of the bottom surface of said first frame where the side wall is not formed.

11. (Original) The container module as claimed in claim 10, wherein an upper portion of each side wall has a stepped portion formed towards the bottom surface.

12. (Previously Presented) The container module as claimed in claim 10, wherein the first frame includes a supporting member supporting the second frame, the supporting member being installed at the side peripheral portion of the first frame where the side wall is not formed.

13. (Original) The container module as claimed in claim 12, wherein both ends of the supporting member are vertically bent and extend towards the side wall positioned in perpendicular to the supporting member.

14. (Original) The container module as claimed in claim 12, wherein a first fixing part is formed at an upper portion of the supporting member so as to fix the second frame to the upper portion of the supporting member.

15. (Original) The container module as claimed in claim 14, wherein the first fixing part is integrally formed with the supporting member.

16. (Original) The container module as claimed in claim 14, wherein the first fixing part has a fixing projection protruded at the upper portion of the supporting member and a coupling hole perforating the fixing projection.

17. (Original) The container module as claimed in claim 10, wherein an upper portion of said second frame has a stepped portion formed towards a bottom surface of said second frame.

18. (Original) The container module as claimed in claim 10, wherein said second frame has a first side having a first groove formed in a length direction of said second frame and a second side having a second groove formed in the length direction of said second frame.

19. (Original) The container module as claimed in claim 18, wherein the first groove has a substantially rectangular sectional shape defined by a cover portion, a bottom portion and a side portion, with a side of the first groove opposite to the side portion open.

20. (Original) The container module as claimed in claim 19, wherein a center of the bottom portion is removed.

21. (Previously Presented) The container module as claimed in claim 19, further comprising a reflector installed in the first groove defined by the cover portion, the bottom portion and the side portion.

22. (Original) The container module as claimed in claim 21, wherein the reflector is made of polyethylene terephthalate.

23. (Previously Presented) The container module as claimed in claim 18, wherein said second frame includes a second fixing part coupling said second frame with said first frame.

24. (Original) The container module as claimed in claim 23, wherein the second fixing part is integrally formed in said second frame.

25. (Original) The container module as claimed in claim 23, wherein the second fixing member is positioned below the second groove.
